

FOLLOW MULTIPLE-STEP INSTRUCTIONS

When you read an instruction manual, you must follow multiple-step instructions in order to complete a specific task. To follow instructions effectively, complete the steps in order. Note illustrations and notes that give additional information about the steps. Use a checklist like the one below.

Checklist for Following Multiple-Step Instructions

- Read all the requirements and instructions completely before starting to follow them.
- Look for clues such as bold type or capital letters that point out specific sections or important information.
- Take note of illustrations and other visual aids.
- Follow each step in the exact order given.
- Do not skip any steps.

Make sure to follow the steps above and read all instructions in order to create your own Apatosaurus using Origami on the following pages.

ORIGAMI

by Rachel Katz
APATOSAURUS

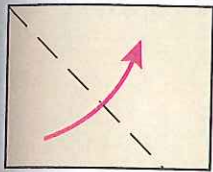

Begin with a 9 inch by 12 inch piece of construction paper or an 8 ½ inch by 11 inch sheet of copy paper.

Instruction Manual

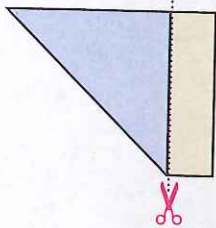

Features:

- a series of steps that explain a process
- visual aids that make each step clear
- a result that readers can achieve

The instructions tell what kind of paper you need to complete the project.

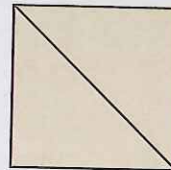

1 Place the rectangle sideways. Valley fold the left-hand side up to meet the top, thereby making a triangle.

2 Cut along the side of the triangle.

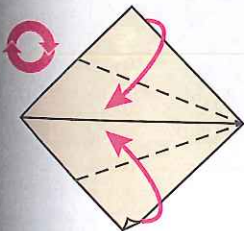

3 Save the rectangular piece of paper for the dinosaur's legs.

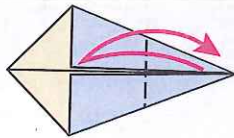

4 Open out the triangle into a square. Turn the square around to look like a diamond, making sure the existing fold-line is running horizontally across the paper.

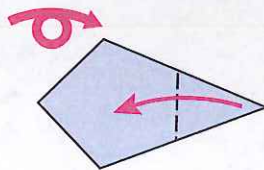

Body

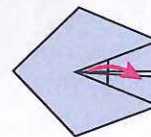

5 From the right-hand corner, valley fold the top and bottom sloping edges over to meet the middle fold-line, thereby making the kite base.

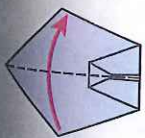

6 Valley fold the right-hand point over to meet the vertical edges. Press it flat and unfold it.

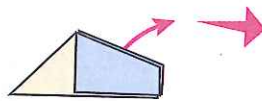

7 Turn the paper over. Valley fold the right-hand point over along the fold-line made in step 6.

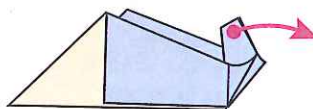

8 Valley fold the point over back out toward the right.

9 Valley fold the paper in half from bottom to top.

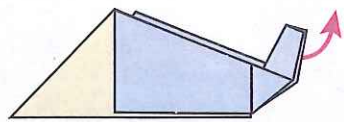

10 Reach inside the model and pull out the . . .

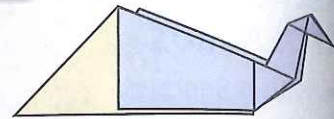

11 dinosaur's neck. Press it flat, into the position shown in step 12.

Numbered steps show the order in which instructions should be followed.

Illustrations help you check to see if you are completing the steps correctly.

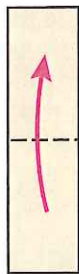

12 Reach inside the neck and pull out the . . .

13 Head. Press it flat, into the position shown, thereby completing the body.

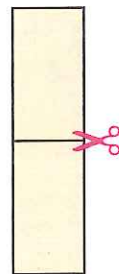

Legs

1 Use the remaining rectangle. Fold bottom up to the top.

2 Unfold.

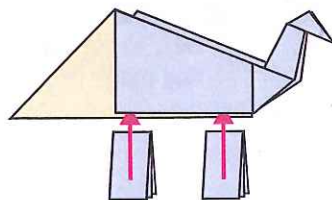

3 Cut in half along crease.

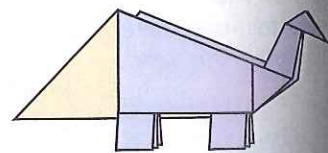

4 Fold in half.

5 Fold top down.

6 Staple as shown.

7 Here is the completed apatosaurus.
